Cooperative Control of Distributed Multi-Agent Systems allow the design of control systems that are able to learn on-line unknown, nonlinear functional uncertainties and thus improve the overall performance of the closed-loop. This research was nancially supported by DAGSI and AFRL under the project entitled Distributed Cooperation and Control for Autonomous Air Vehicles.

This paper reviews some main results and recent progress in distributed cooperative anti-disturbance control (DCADC) of multi-agent systems. Compared with anti-disturbance control in single systems, DCADC is more challenging because of the existence of coupling in multi-agent systems and the aim is to design distributed cooperative control based on the local information of each agent. This paper is concerned with some kinds of DCADC methods, such as distributed cooperative variable structure
